

Coast-to-Coast with C.P. and H.E. Huntington:

Echoes of Oneonta

Howard Zendle

March 26, 2024

Introduction

In this seventh and last episode in a series tracing the careers of six Oneonta entrepreneurs towards regional or national achievement, we will see how Collis Potter and Henry Edwards Huntington labeled their achievements with their hometown's name. In the case of Collis P. Huntington, we left off his story at the point in 1869 where his Central Pacific Railroad, built east from Sacramento, united with the Union Pacific Railroad, built west from Council Bluffs, Iowa, at Promontory Point, Utah. To have created part of the first transcontinental railroad (which it became by connection to existing, individual railroad lines to the East Coast) would be a career capper for any man. But C.P.'s and H.E.'s later careers as railroad builders continued until their deaths respectively in 1900 and 1927. The purpose of this paper is to describe how the pair's ties to Oneonta expressed themselves in their lives and work.

C.P.'s first accomplishment was to consolidate and add to the Central Pacific (CP) and its successor the Southern Pacific (SP) until the latter dominated railroading in the State of California and the American Southwest as it passed through Arizona, New Mexico, Texas, and Louisiana to New Orleans. Fairly or unfairly, Frank Norris's muckraking novel The Octopus attempted to characterize the hold of the SP on California. C.P. controlled the SP empire until his death, after which his share was sold by his heirs to the E.H. Harriman interests.¹

His second was to establish an eastern railroad in central Virginia linking tidewater at Newport News, Virginia with Lexington and Louisville, Kentucky, and Memphis, Tennessee. In this effort, Huntington employed many former Oneonta

friends and relatives. Eventually extension of the Chesapeake and Ohio Railroad to New Orleans occurred. Thus, while he controlled the SP and C & O, C.P. could embark on a train in San Francisco on the West Coast and travel east through New Orleans to Newport News on his own rails. He often did so in his two-car personal railway carriages called, appropriately, *Oneonta 1 and 2*. It will be shown that C.P. frequently employed Oneonta friends and relatives to build, manage, and extend the towns and infrastructure over which the C & O passed.

His third was to establish Newport News Shipyard, a national asset which produces naval warships and found the city of Newport News, Virginia where it is located.

The last great accomplishment was his generosity to charitable organizations. A staunch abolitionist before the Civil War, he donated generously to the Hampton Institute, Virginia (at the time an all-black school). Many paintings were contributed to the Metropolitan Museum of Art in New York where Huntington and his wife resided after 1863. Other examples will follow.

Southern Pacific through Southern California and Beyond to New Orleans

The further growth of the original Central Pacific into the California-straddling Southern Pacific Railroad and its eventual convergence on New Orleans is a fascinating story which exceeds the scope of this work.² The important fact here is that the Sunset Route from California to New Orleans began operating on February 5, 1883.³

The Eastern Road

In constructing the C & O and related between Newport News, Virginia, and New Orleans, Louisiana, Huntington pieced together many individual segments into a cohesive whole which made use of nearby resources. For example, he needed to locate a railroad terminal on the Ohio River to provide access to cargo boats which traveled to Cincinnati. He picked an area with a four-mile frontage on the Ohio near forests, coal mines iron sources, oil, and natural gas. To procure the

needed land he sent for the highly competent Col. Delos W. Emmons of Oneonta, who was married to a sister of Mrs. Huntington.⁴ Soon, Emmons purchased nearly 5000 acres which, when land for the railroad facilities was sectioned off, left space having wide street blocks large enough for businesses and houses.⁵ The town was named Huntington, West Virginia in May 1871. A precursor of American Car and Foundry, the Ensign Manufacturing Co. was incorporated by Messrs. Huntington, Emmons, and others in November 1872. It output 60,000 railway car wheels per annum. Bradley Waters Foster, married to C.P.'s niece from Oneonta, began a hardware store and became a commercial leader of Huntington.⁶ So it is clear that Oneontans were key figures in establishing this new West Virginia community on the C & O. As of 1954, the city of Huntington had grown to 85000 residents manufacturing goods worth \$50,000,000 per year. What is equally amazing is that Huntington's work on the C & O was done in parallel with that on the Southern Pacific. The final piece linking the C & O at Memphis to New Orleans was the Louisville, New Orleans, and Texas railroad.⁷

With the link of his western (SP) and eastern (C & O) railroads at New Orleans, C.P. Huntington was able to travel from coast-to-coast on his private cars Oneonta 1 and 2. The first was like a rolling mansion having a drawing room, parlor, library, and family quarters.⁸ The second contained a kitchen, wine cellar, storehouse, refrigerator, and servants. If desired, C.P. could live 6 months on his cars at maximum quality of life.

Back to the East Coast

The eastern terminus of the C & O was Hampton Roads, Virginia where C.P. founded the city of Newport News. As a destination for West Virginia coal to be exported on seagoing ships, he discovered the constant need for their repair and upkeep. He founded what became the Newport News Shipyard, employing 4000 workers at his death and on track to build capital ships for the U.S. Navy in both world wars.⁹ Today this shipyard is called Huntington-Ingalls Industries and is the only yard which produces nuclear aircraft carriers for our fleet.

Gifts to the World

C. P.'s gifts to the world, while alive and by his estate, were always designed to promote human welfare by enabling learning. After founding the city of Newport News, he gave a several lots on which to build schools, churches, and the courthouse.¹⁰ He also founded the museum known as Brookgreen Gardens in South Carolina containing about 300 sculptures by American artists.¹¹ After he passed, his former home at Fifth Avenue and 89th Street in Manhattan was given to the National Academy of Design.¹² (New York City was Huntington's home base for the last thirty years of his life).

The Huntington Library at the Hampton Institute was a gift of his wife and son and was dedicated by Booker T. Washington on April 28, 1903 who said:

His loved ones have the rare privilege and satisfaction of knowing that in turning some of the results of his historic struggle into useful occupations, into books, into poetry, and religion, into higher, beautiful and useful living, they are doing what he would have done, and there could be no more fitting memorial.¹³

In California, his former wife Arabella and nephew H.E. contributed to the H.E. Huntington Library and Art Gallery at San Marino, the Huntington Hospital in Pasadena, and the Huntington Park for Children in San Francisco.¹⁴ H. E. Huntington had developed real estate on a base of electric interurban railroads in the Los Angeles Basin. The street sign from Pasadena, CA reflects his influence. A major junction, station, and residential community in the Northern District of H.E.'s Pacific Electric Railway bore the name Oneonta Park.

Taken by the author in 2012.

C.P. had a camp called Pine Knot on Raquette Lake in the Adirondacks which he accessed by a small steamboat called *Oneonta*.¹⁵ After his death, Pine Knot was donated to SUNY Cortland, which uses it to the current day for outdoor training.

Conclusion

C.P. and H.E. Huntington spread the name of Oneonta nationwide literally by naming their public artifacts after their home town, and employing its citizens in their cross-country railway and urban construction. They did so figuratively by enabling educational opportunities for people of all ages and races. Their spirit and that of Oneonta continue to build progress for the common man through the breadth and depth of their industrial and philanthropic goals.
